<https://github.com/JayV11>

Data Science and AI undergraduate at PUC Campinas and Data & AI Assistant at CCI Gerenciamento de Riscos, where I own the entire data pipeline — from web extraction and ETL automation through machine learning and delivery in Power BI. Experience applying ML to real production data (1.2M+ records), replacing manual processes with automation and taking data solutions to the cloud. Analytical, proactive and quick to learn new technologies.

Skills

- Python (NumPy, Pandas, Scikit-learn, Matplotlib, PySpark, PyTorch, Plotly...)
- Relational and non-relational databases (SQL and NoSQL).
- Excel (spreadsheets, macros and VBA)
- Power BI (Power BI and Power Automate)
- Microsoft Azure (Container Apps, Blob Storage)
- Time Series (Seaborn, Statsmodels, Prophet, pmdarima, StatsForecast...)
- Docker & Git (containerization, CI/CD with GitHub Actions)

Projects

◆ Staple Food Basket Price Monitoring (Azure & Docker)

Price-monitoring platform for the staple food basket, built with Python, ML and cloud. Interactive dashboards in Dash/Plotly, segmentation with PCA + KMeans, containerization with Docker and deployment on Azure (Container Apps, ACR, Blob Storage), with CI/CD fully automated via GitHub Actions.

◆ Road Scan Dashboard (CCI Gris)

End-to-end solution for road accident analysis in Brazil: ETL, exploratory data analysis (EDA), predictive modeling with Random Forest, PostgreSQL and an interactive dashboard in React. Feature engineering and BI to turn raw accident data into actionable risk insights for decision-making.

◆ RPA and ETL Automation of the Data Process (CCI Gris)

Designed and built the end-to-end automation of the logistics ETL pipeline in Python: automated extraction of reports from web platforms (requests, Selenium), consolidation and deduplication into master spreadsheets (pandas, openpyxl) and automatic publishing of Power BI dashboards via RPA (Power Automate Desktop), scheduled in Windows Task Scheduler. Replaced a 100% manual routine, saving ~12 hours/week and ensuring all 33 dashboards refresh reliably every morning.

Professional Experience

2026

[Assistant] Data Analysis and AI (CCI Gris)

Responsible for 33 production Power BI dashboards for transportation and logistics clients, with modeling and transformations in Power Query (M).

Automated the entire ETL process in Python (extraction, consolidation and daily publishing), eliminating manual report updates and freeing up ~12 hours of work per week.

Applied machine learning to 1.2M+ records of non-conformities and incidents — clustering (K-Means/DBSCAN), time-series forecasting (Prophet) and supervised classification — to score driver risk and reveal operational patterns.

Worked side by side with operations, security and leadership, turning data into strategic decisions.

2024-2026

[Sales Representative] A.paula & CIA, Calçados Bibi

Customer-facing role: client relationship management, commercial negotiation and operational support — developed strong communication and problem-solving skills.

Education and Training

PUC Campinas — Bachelor's Degree in Data Science and Artificial Intelligence (2023-2027)

Language School CNA — Advanced English (2019–2022)

Data Science Academy — DS & AI (2024); Data Engineering (2025)

IBM — Chatbots and Generative AI (2025); Granite (2026)
