jayv1i.github.io/JayV1l

Data Science and AI undergraduate at PUC Campinas and Data & AI Assistant at CCI Gerenciamento de Riscos, where I own the entire data pipeline — from web extraction and ETL automation through machine learning and delivery in Power BI. Experience applying ML to real production data (1.2M+ records), replacing manual processes with automation and taking data solutions to the cloud. Analytical, proactive and quick to learn new technologies.

Skills

- Python (NumPy, Pandas, Scikit-learn, Matplotlib, PySpark, PyTorch, Plotly...)
- Relational and non-relational databases (SQL and NoSQL, including PostgreSQL)
- Excel (spreadsheets, macros and VBA)
- Power BI (Power BI and Power Automate)
- Microsoft Azure (Container Apps, Blob Storage)
- Time Series (Seaborn, Statsmodels, Prophet, pmdarima, StatsForecast...)
- Docker & Git (containerization, CI/CD with GitHub Actions)
- HTML, CSS and JavaScript (site published on GitHub Pages)

Projects

- ◆ **Basic Food Basket Monitoring (Azure & Docker)**
Food basket price monitoring platform built with Python, ML and cloud. Interactive dashboards in Dash/Plotly, segmentation with PCA + KMeans, containerization with Docker and Azure deployment (Container Apps, ACR, Blob Storage), with CI/CD fully automated via GitHub Actions.
- ◆ **Road Scan Dashboard (CCI Gris)**
End-to-end solution for road accident analysis in Brazil: ETL, exploratory analysis (EDA), predictive modeling with Random Forest, PostgreSQL and an interactive React dashboard. Feature engineering and BI to turn raw accident data into actionable risk insights for decision-making.
- ◆ **RPA and ETL automation of the data process (CCI Gris)**
I designed and built the end-to-end automation of the logistics data pipeline in Python: automated extraction of reports from web platforms (requests, Selenium), consolidation and deduplication in master spreadsheets (pandas, openpyxl) and automatic Power BI dashboard publishing via RPA (Power Automate Desktop), scheduled in Windows Task Scheduler. Replaces a 100% manual routine, saving ~12 hours/week and ensuring the 33 dashboards refresh reliably every morning.

Professional experience

2026

[\[Assistant\]](#) Data & AI Analysis (CCI Gris)

Responsible for 33 production Power BI dashboards for transportation and logistics clients, with modeling and transformations in Power Query (M). I automated the entire ETL process in Python (extraction, consolidation and daily publishing), eliminating manual report updates and freeing ~12 hours of work per week. I applied machine learning on 1.2M+ non-conformity and claim

records — clustering (K-Means/DBSCAN), time-series forecasting (Prophet) and supervised classification — to score driver risk and reveal operational patterns. Close collaboration with operations, safety and leadership teams, turning data into strategic decisions.

2024-2026

[\[Representative\]](#) A.paula & CIA, Calçados Bibi

Customer-facing role: client relationship, commercial negotiation and operational support — I developed strong communication and problem-solving skills.

Education and certifications

- PUC Campinas — B.Sc. in Data Science and Artificial Intelligence (2023-2027)
- CNA Language School — Advanced English (2019-2022)
- Data Science Academy — DS & AI (2024); Data Engineering (2025)
- IBM — Chatbot and Generative AI (2025); Granite (2026)
